

Moodle theme Classic

Moodle Core / Open Source

Mathew May - Open Source
May 2019

Why add Classic and for Who?

- In Moodle 3.7 we removed the 'Clean' & 'More' themes, so we wanted to provide a familiar experience for users
- Moodle wanted to ensure there was an upgrade path for Moodle sites still using Clean & More

- Single Bootstrap version

- Child theme of Boost

- 3 column layout

- Familiar blocks

The screenshot shows a Moodle course page for 'Stress management'. The page has a three-column layout. The top navigation bar includes 'Mount Orange', 'English (en)', a search icon, and a user profile for 'My C Wilson'. The course title 'Stress management' is displayed, along with the breadcrumb 'Dashboard / My courses / Stress Free' and a 'Turn editing on' button. The main content area is divided into three columns. The left column contains a 'Navigation' menu with items like 'Dashboard', 'Site home', 'Site pages', 'My courses', 'Stress Free', 'Celebrating Culture', 'Veg Cook', 'Healthy Living', 'Writing_R', 'Psych One', 'Oceans', 'Exam_prep', and 'Induction'. Below this is an 'Administration' section with 'Course administration', 'Edit settings', 'Turn editing on', and 'Course completion'. The middle column features a 'Welcome to the stress-free zone!' message with a 'Your progress' indicator and a photo of a person in a sun hat. Below this are sections for 'What is stress anyway?' and 'How can we manage it?'. The right column contains 'Online users' (1 online user), 'Activity results' (Task: Solutions to stress), 'The 2 highest grades' (Mark Ellis 64.00%, Frances Banks 52.00%), and a 'Random glossary entry' for 'Happiness'.

How can it be customised?

- **Settings, Templates & SCSS**

Classic is very similar to Boost and Bootstrapbase based themes in that you can modify settings, override core templates & any SCSS you add into the theme can and will be cached

- **Custom renderers & widgets**

Classic allows you to define your own renderers & write custom widgets to assist with displaying your information

An example of migrating

- During the Moodle 3.7 release we had to migrate our own sites from Clean based themes to Classic
- We wanted to ensure a smooth user experience and minimal disruption

MSA-19-0012: Private files uploaded via incoming mail processing could bypass quota restrictions

Michael Hawkins
Monday, 20 May 2019, 2:46 PM

The size of users' private file uploads via email were not correctly checked, so their quota allowance could be exceeded.

Severity/Risk: **Minor**

Versions affected: 3.6 to 3.6.3, 3.5 to 3.5.5, 3.4 to 3.4.8, 3.1 to 3.1.17 and earlier unsupported versions

Versions fixed: **3.7, 3.6.4, 3.5.6, 3.4.9 and 3.1.18**

Reported by: Guillermo Leon Alvarez Salamanca

Workaround: Disable the "Email to Private files" message handler until the fix is applied. This is disabled by default in Moodle.

CVE identifier: CVE-2019-10134

Changes (master): <http://git.moodle.org/gw/?p=moodle.git&a=search&h=HEAD&st=commit&a=MDL-61738>

Tracker issue: MDL-61738 Private files uploaded via incoming mail processing could bypass quota restrictions

Security announcements

The best way to keep track of the recent security issues and get the latest information is to register your Moodle site with moodle.org.

By registering your Moodle site, your email address is added to the low-volume mailing list for important and most up-to-date information, including new and point releases and notifications such as security alerts.

We highly recommend you register your site.

Otherwise, after each release, all important security issues are published in this forum, which you can subscribe to (moodle.org account required).

Please note that if you subscribe to the security forum and Twitter options, there will be a delay of up to one week until the information becomes available.

Michael

HOW CAN I REPORT A SECURITY
ISSUE?

Create a new issue in the Moodle Tracker
describing the problem, and setting an
appropriate security level. Alternatively, email
security@moodle.org.

See Moodle security procedures for further
details.

ADMINISTRATION

- Forum administration
 - Optional subscription
 - Subscribe to this forum
 - Don't track unread posts
 - RSS feed of posts

Things to keep in mind

- Block docking is no longer supported by Moodle core themes, vote MDL-64567 if you wish
- Moodle will only be supporting Bootstrap 4 classes with limited compatibility for Bootstrap 2 classes
- When contributing from Moodle 3.7 onwards, ensure that you use the correct classes otherwise your layout changes may not work as expected
- Refer to the docs on Moodle.org
https://docs.moodle.org/dev/Creating_a_theme_based_on_classic
