From this

3. Introduction to human anatomy

"The human mechanism is marvelous. But why not—it is the result of three-and-a-half billion years of tinkering." - Isaac Asimov

To recognise healthy body systems, we must first understand the basic make-up of human body.

Anatomy describes the structure and shape of the body and its parts. It describes the structure of cells, tissues, organs and organisms.

Physiology describes how the body and its parts work or function. It relates the anatomical features to their role in good health.

Homeostasis is the process that all living things use to actively maintain the stable conditions necessary for survival, such as body temperature and blood pressure.

It is important you have an understanding of terminology related to health, anatomy and physiology. As a support worker or carer, you will use terminology and abbreviations in your day to day job role.

Re-usable UI elements for Moodle (& elsewhere)

The following UI elements can be used to decorate your Moodle contents and create interactivity, all within the Moodle editor.

They use a combination of Bootstrap and FontAwesome. These are both 'baked in to Moodle' so it makes editing a breeze
